Aims of Workshop

This workshop offers a rare opportunity to review current best practice for common urogynaecological presentations.

Learning Objectives

Workshops delegates will leave the workshop feeling confident with the following:

- Initial assessment and management of common urogynaecological presentations
- Identify the treatment options for patients presenting with stress incontinence
- Identify and manage OASIS injuries and provide appropriate follow up care
- Outline management of urogynaecological complications associated with placenta accreta spectrum
- Manage post operative bladder complications
- Identify and provide initial management of urinary tract injury following obstetric and gynaecological surgery

Target Audience

Generalists/Obstetricians/Gynaecologists/Allied Health
